

## Carbon Management Policy

Fiji Airports operates 15 airports in the Fiji Islands including Nadi and Nausori International airports and 13 other domestic airports which are located on islands scattered over Fiji's maritime zone.

FA understands the impact that our airport operations have on the environment, principally towards climate change. Therefore we are committed towards reducing our carbon emissions with the aim of reaching net zero by 2050. This being aligned with the Paris Agreement (2016) and Fiji's Low Emission Development Strategy (LEDS) 2018 – 2050.

In striving towards our long term goal of achieving net zero emissions, Fiji Airports is committed to:

- Undertaking relevant research and data collection in order to identify, understand and control activities of our operation that generate carbon;
- Developing plans to ensure carbon emitting activities are monitored in order to create a strong baseline carbon inventory;
- Consistently monitoring the credible carbon data with the mitigative measures in place in accordance with the Airport Carbon Accreditation process;
- Using an independent third party to review and verify data indicating company carbon output whenever possible;
- Setting carbon reduction targets that are achievable and creating supporting action plans to effectively reduce our carbon output;
- Progressively invest in acquiring environment friendly products to support our ambition for greener airport;
- Ensuring that all of our employees know the part they play in carbon management and that those we work with, our partner organizations, understand that we are committed to reducing our carbon output;
- Working closely with airlines and key stakeholders to understand their approach to reducing and mitigating the impact of the carbon emissions of aircraft operations, over which the Airport operator has no direct control;
- Lead by example and showing the way for our partners and stakeholders in the aviation industry to also engage in good environmental practices.

We are committed to upholding this Policy with the responsibility extending to all our staff, airport tenants and other aviation stakeholders that operate at our airports. This policy will be reviewed every 3 years and updated as deemed necessary.
